

Country Corridor Disposal's once per week service plan allows for the same amount of garbage to be collected while offering a variety of positive personal, environmental and financial impacts. For example:

- It will prevent 50 tons of CO2 emissions annually, it would take 60 acres of U.S. forest 1 year to sequester that amount of CO2, the emissions are equivalent to the energy used to charge over 6 Million smartphones, or the use of 2,300 propane tanks on your grill at home.
- Heavy trucks are rough on the local city, county and even neighborhood infrastructure. Once a week service means less garbage trucks in your neighborhood, and also less garbage cans on the curb allowing the beauty of our community to be on full display!
- The growth in our area is rapid, exponentially more vehicles on the road, having less garbage trucks on the road will only help ease the pain of rush hour traffic.
- It allows for Country Corridor to provide you the service you deserve, and make sure that we get all of your trash collected every week, on YOUR service day! It also allows for flexibility during the holiday weeks to make sure that everyone will get serviced, and no one gets left hanging when they need service the most.
- Lastly, industry experience shows that participation on the 2nd service day of any given week is less than 20%.

Now, isn't that better?
